FloraCoco is a high quality, efficient 2-part nutrient, specifically designed to bring you the best results on coconut fibre.

This powerful formula, unique and exhaustive, includes enough calcium and magnesium to guarantee your plant an excellent development, with no need for calcium, magnesium and phosphorus additives, as requested by the majority of coconut fibre nutrients existing on the market today.

FloraCoco Grow brings balanced and complete plant nutrition for the vegetative phase. This unique formula includes high levels of our special "calcium/magnesium" mix.

FloraCoco Bloom is an aggressive formula tuned for increased yields during the flowering phase. This unique formula includes high levels of phosphorus and all the necessary elements for abundant flowering.

As a general rule:

- **Suggested EC** : Cuttings : 0.4 - 0.6 - Seedlings : 1.2 - 1.5 - Growth, flowering & fruiting : 1.5 - 2.2.
- Adjust your water to a **pH** of 5.5 to 6.5. Check your pH level regularly. To stabilize your pH, use our liquid pH Down, as it contains organic buffers.
- **Shake well before using** : FloraCoco is very concentrated. Very little is needed for your crop. To avoid precipitation while mixing your solution, pour each component separately in the water and rinse your measure between each serving.

*** For seeds (all substrates):**

- As soon as the first roots appear, apply the dosage for «cuttings», in the application chart.
- As soon as growth resumes, apply the dosage for «vegetative».

For pure growth, and for mother plants:

- Apply the same dosage as for the first week of flowering (Grow 30/Bloom 10).

- **FLORAKLEEN** : eliminates accumulated salts in hydroponic systems, substrates and potting soils.
- **RIPEN** : 10 last days for faster flowering
- **BIO ROOTS** : Root activator
- **BIO PROTECT** : Immune system activator - (In foliar spray once a week)
- **BIO BLOOM** : Flowering activator
- **DIAMOND NECTAR** : Strengthens the root system - Improves the plant's general health
- **MINERAL MAGIC** : Increases the resistance to insects and disease. Stabilizes the pH
